

PC Health Check

A computer health check is akin to an MOT; giving it a regular service will help to keep it running smoothly, will identify potential threats and prevent damage from escalating in the event that there is a problem.

Your computer health check will include:

- ✓ Identifying corrupted (damaged) files and folders
- ✓ Out-of-date software
- ✓ Checking the state of your hard drive
- ✓ Scanning for viruses and spyware
- ✓ A physical clean, removing any dust or debris.
- ✓ Checking your back-up procedure
- ✓ Recommendations for improving the performance and security of your computer.

Ideally we should all run a health check on our PCs every year to ensure that your technology is working to the very best of its ability.

If your computer is essential to your everyday life then contact us today to book it in for a health check 01273 248871
