

Websites

All businesses need a website – but they also need a website that will be found online and reflects the professionalism of your business.

Dolphin Computer Upgrades Ltd can host and install a WordPress website and build a template that both suits you from a company point of view, but also with all the SEO attributes required for a modern site.

WordPress is the most cost effective solution and has excellent SEO attributes. By using this type of platform you don't have to invest in bespoke code for Content Management Systems. Website design will be based on conversations between our company and yours, however initially we will screenshot a couple of design ideas over to you and based on your response, we can start narrowing down the design template in this process.

We offer two options for businesses:

One Off Package

There is a set fee based upon how many pages you will require for your website. We recommend a minimum of three pages, most sites have an average of five, or you can have multiple pages if this is what your business requires. Obviously the costs will increase as the pages do.

Once the site has been designed, installed and signed off it will be left to you to manage, update and maintain the website.

Subscription Package

This will incur a one-off design/setup fee again based upon how many pages you envisage you will require. You are then in contract with Dolphin Computer Upgrades Ltd for a two year period and will pay monthly throughout this contract. By choosing the subscription package you not only spread your costs, but you will also receive the following benefits:

Wordpress Updates/Security Checks

Basic Page / Word Updates on Pages, Script & Text (Meaning you can send us your changes and we do it all for you. We manage your site on your behalf, allowing you to concentrate on your business).

We can perform a template change every 20 months if you want the site refreshed and we allow the site to evolve and develop with constant updates from web industry standards.

By taking the subscription package we maintain the security and update / manage your site on your behalf at a set monthly cost. The advantage of this route against the one off route is the site constantly changes, rather being redesigned and redeveloped from the start every couple of years. In addition, you can spread the cost.

If you would like to take advantage of our website packages, or would like to know more about costings/timelines then please give us a call on 01273 248871.
